Problem statement

Making User Friendly Solution

Sometimes, people need help or answers in the middle of the night. Having a website means the information they need is always available and all in one spot, no need to call. This is especially important for hospitals, since sometimes patients need things like directions in a hurry.

What customers do today

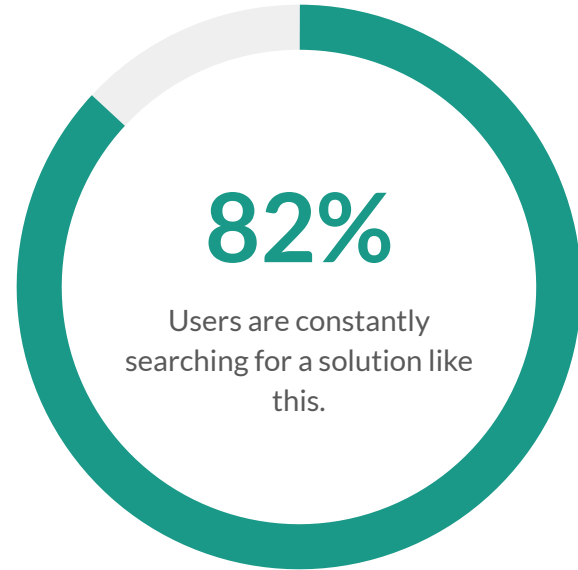

Justification of our effort to try to solve the problem.

They can get informations about the hospital and get support at anytime and from anywhere they want.

Supporting information

Explaining why we are focusing on this problem.

Introduction

- The Software is for the automation of Hospital Management System
- It maintains two levels of users:-
Administration Level, User level
